Turboline AI Chat Completion:

You can use the Chat Completion API endpoint in Turboline AI Platform. However, the documentation provided on the API page only shows chat completion for regular text prompts as shown below.

```
1.  {
2.      "messages": [{
3.          "role": "system",
4.          "content": "You are a helpful assistant"
5.      }, {
6.          "role": "user",
7.          "content": "How are you?"
8.      }],
9.      "max_tokens": 50
10. }
11.
```

Image Analysis using Chat Completion

If you want to analyze images, you simply replace the body of your API request with the following payload.

You must replace the image URL in the payload with your own image. Using some kind of free image hosting service will work. Examples below

- ImgBB — Upload Image — Free Image Hosting
- Postimages — free image hosting / image upload

```
1.  {
2.    "messages": [
3.      {
4.        "role": "user",
5.        "content": [
6.          {
7.            "type": "text",
8.            "text": "Explain what is happening in this image."
9.          },
10.         {
11.           "type": "image_url",
12.           "image_url": {
13.             "url": "https://i.postimg.cc/GpfQQpD3/cricket.jpg"
14.           }
15.         }
16.       ]
17.     }
18.   ],
19.   "max_tokens": 400
20. }
21.
```
